

Assignment 02

Conceptual Modeling of an Interactive System

Deadline: April 22, 2026

Objective: The objective of this assignment is to enable students to understand and apply conceptual modeling by analyzing a real-world system. Students will describe the conceptual model of a chosen system (website, app, or machine), identify its functions, and analyze its interaction mechanisms.

Instructions:

Step 1: Choose a System: Choose a system that you are familiar with or can easily research to gather sufficient information for analysis. You may choose from the following options:

- A website (e.g., an ecommerce website, a travel website)
- An app (e.g., food delivery app, social media app, bank app)
- A machine (e.g., washing machine, vending machine, ATM)

Step 2: Description of the System: Write a brief description of the chosen system, including its purpose, target users. Describe how the system works from the user's perspective.

Step 3: Identify Components and Relationships: Identify the main components or entities within the system. These could be **things** (physical objects, devices, products, etc.), **information objects** (Data, documents, messages, etc.), or **people** (Users, administrators, customers, etc.) involved in the system. Determine how these components are related to each other. What are the dependencies, associations, or interactions between them? Visualize these relationships using diagrams that show the entities and relationships.

Step 4: Flow Chart: Create a flow chart to show how some specific aspect of the system works. For example, create a flow chart of the user's process for completing a key task within the system (e.g., making a purchase on an e-commerce website, posting a message or photo on a social media app, withdraw money from an ATM)."

Flow chart provides a clear and simple way to visualize a user's journey through a specific part of the system.

Step 5: User Functions: List down the functions or actions that users can perform on the system.

Step 6: User Interface and Interaction Mechanism: Describe the interaction mechanism between users and the system. Explain how users interact with the system to perform various functions. Understand the user interface, interface metaphors, input methods, feedback mechanisms.

Deliverables:

- A written report containing the description of the system, identified concepts/objects, relationships, flow chart, user functions, and interaction mechanism.

Submission Guidelines:

- Submit your assignment report in a PDF format until midnight on April 22, 2026.
- Name your assignment as a02_id_name.pdf where id is your student id, name is your first name. For example, a02_123456_sophie.pdf
- Submit your assignment through the designated platform.
