Part 1: Course Information

Course: ISE323 Human-Computer Interaction

Semester: Spring 2026

Instructor name: Dr. Shafqat Rehman

Instructor's contact information: 24401@ahu.edu.cn

Credit Hours: 3

Course Description:

This course provides an introduction to the field of Human-Computer Interaction (HCI) and interaction design. Students will gain a solid understanding of HCI guidelines, principles and concepts and apply them to solve practical problems in designing user-friendly interfaces. The course covers topics such as conceptual/social/emotional interaction; and design, prototyping and evaluation of interactive systems that facilitate effective and enjoyable human-computer interaction.

The emphasis will be placed on the iterative design process, which involves understanding user needs, prototyping and testing designs, and incorporating feedback to refine the user experience. Students will learn various methods and techniques for user research, usability testing, and evaluation, including heuristic evaluation, cognitive walkthroughs, and user testing.

The students will work in teams on a project to design and implement an HCI system or application. The project will allow students to apply the knowledge and skills acquired in the course to solve real-world problems and create interactive systems that meet user needs and preferences.

Text Books and Reference Material:

1. Interaction Design: Beyond Human-Computer Interaction, 6th edition,
2. <https://www.interaction-design.org/>
3. Human-Computer Interaction Fundamentals and Practice by Gerard Jounghyun Kim
4. The Design of Everyday Things by Don Norman

Part 2: Learning Objectives

- By the end of the course, students will have developed a solid foundation in HCI guidelines, principles, and theories.
- Students will learn the basic physiological, perceptual, and cognitive components of human learning and memory.
- Students will learn to analyze interaction problems from a technical, cognitive, and functional perspective.
- Students will be able to apply iterative design, prototyping, and evaluation methods to design usable interfaces that enhance user satisfaction, productivity, and engagement.
- Students will gain theoretical knowledge of and practical experience in the fundamental aspects of designing, implementing, and evaluating user interfaces.

Part 3: Tentative Course Schedule

Week	Date	Lecture Topic
1	March 02	Introduction to HCI
	// 05	Introduction to HCI (cont.)
2	March 09	Basics and Principles
	// 12	Basics and Principles (cont.)
3	March 16	What is Interaction Design?
4	March 23	Conceptualizing Interaction
	// 26	Conceptualizing Interaction (cont.)
5	March 30	Cognitive Aspects
	April 02	Cognitive Aspects (cont.)

	April 04 – April 06	Qingming Festival
6	April 09	Social Interaction
7	April 13	Emotional interaction
8	April 20	Interfaces – Part 01
9	April 27	Interfaces – part 02
10		Midterm Exam
	May 07	Prototyping
11	April 11	Heuristic Evaluation
12	May 18	The Psychopathology of everyday things
13	May 25	Design Patterns
14	June 01	Designing for Diversity
15	June 08	Revision
17		Final Exam

Part 4: Grading and Work Policies

Composition of Grade	Percentage	Dates
Close-book Final Exam	35%	Week 17
Close-book Midterm Exam	30%	Week 10
Assignments	15%	
Group Project	20%
